Amendments to the Specification

Please amend page 4, line 12 through page 5, line 15, as follows:

SUMMARY

According to one embodiment of the present invention, a system for managing a development project for a customer includes at least one database having product data, means for allowing the customer to select at least one selected product from at least one of the databases, and means for viewing said at least one selected product. The system allows customer to manage a project through a website and determine how various changes to the project will affect cost, time and other variables.

According to another embodiment of the present invention, a system for collaborating on a development project for a customer includes means for generating a personal file including project data for the customer, means for providing repeated access to the customer, means for allowing the customer to allow access to other users, at least one database having product data, and at least one interactive module allowing the customer to interact with at least one of the databases to make product selections and to allow the customer access to schedule of the other users. The system allows customer to collaborate on a development project with installers, architects and other workers.

According to a further embodiment of the present invention, a system for generating large scale graphics includes at least one database having product data regarding various products, means for selecting at least one product from at least one of the databases, and a printing unit for printing the product as a large scale graphic on self adhesive sheet material for subsequent application. The system allows printing of proofs as well as replacement pieces of wallpaper and other wallcoverings that do not require large quantities, such as borders and trim.

According to a further embodiment of the present invention, a kiosk system for selecting a product in a store includes means for generating a personal file of project data for a customer, at least one database having product data regarding to various products, means for allowing to select at least one selected product from at least one of the databases, and means for viewing at least one selected product. The system allows customer to view various
